

How to Submit your EE 301 Lab

1. **Please submit your Lab report/m-file through GitHub.** We will create a private repository for each student. This repository will be named as EE301_LastName and will be only visible to you. You will then submit your report/m-file to this repository.

2. **Please ignore Lab report Section of each Lab assignment document.** Please submit your own single m-file script (written by you) and a brief lab report with the same file name Lab#_LastName (# is your lab number) for each lab. Here are the new guidelines:

- The lab report should only contain figures, equations, numbers, and explanation sentences which were asked in each lab. Please be concise and try to limit your lab report to 2 pages.
- Please do not include your codes in the report. Your Matlab code should only be included in the submitted m-file script.
- In general, each lab has multiple sub-questions. Your own m-file script should step through these sub-questions in your entire lab. Narrative answers can be displayed using disp() or related commands.
- To make it easier to grade, your m-script should periodically pause after each major step or sub-question.
- **One exception:** If you are asked to modified the code of the m-files that we provide, you should also submit this/these file(s), together with your own m-file script.

Note that we will run your codes for each lab, and we will grade based on your codes.
